# Well-Appearing & Low-Risk & Normal Labs 22-28 Days

## This infant is lower risk

- **Data and analysis** from KPNC febrile infants seen in the ED from 2010-2019 found that of those age 22-28 days who had no high-risk criteria and normal inflammatory markers (temp ≤ 38.5°C, WBC 5-15K, Bands ≤ 1.5k):

  *0/55 had bacteremia without meningitis*

  *0/55 had meningitis*

## Recommendations for this infant

- Consult with Pediatrics
- Admission
- Need not perform LP
- Need not administer parenteral antibiotic
