

# Febrile Infant 0-6 Days

## Early onset sepsis calculator\*

- [Infection Probability Calculator \(kp.org\)](http://kp.org) calculates the neonate's risk of sepsis at birth.

## Recommendations for this infant:

- Perform a septic work-up
  - CBC, UA with micro†, CSF studies, and blood, urinet†, and CSF cultures
- May order a CRP
  - Not routinely required but may be helpful in determining length of therapy if followed serially.
- Pediatrics consult
- Hospital admission
- Parenteral antibiotics

\* *Validated for use in first 24 hours of life*

† *Some experts do not recommend urine studies in first 6 days of life*
