Well-Appearing & Low Risk & Normal Labs 7-21 Days

This infant is lower risk

- **Data and analysis** from KPNC febrile infants seen in the ED from 2010-2019 found that of those age 7-21 days who had no high-risk criteria and normal inflammatory markers (temp ≤ 38.5°C, WBC 5-15K, Bands ≤ 1.5k):

  *1/74 had bacteremia without meningitis**

  0/74 had meningitis

  **this patient had an ANC>5200*

Recommendations for this infant

- Consult with Pediatrics
- Admission
- May perform LP
- May administer parenteral antibiotic
