

Well-Appearing & Low-Risk & Normal Labs 22-28 Days

This infant is lower risk

- **Data and analysis** from KPNC febrile infants seen in the ED from 2010-2019 found that of those age 22-28 days who had no high-risk criteria and normal inflammatory markers (temp \leq 38.5C, WBC 5-15K, Bands \leq 1.5k):

0/55 had bacteremia without meningitis

0/55 had meningitis

Recommendations for this infant

- Consult with Pediatrics
- Admission
- Need not perform LP
- Need not administer parenteral antibiotic
